

Join us at RSNA to discover our most innovative solutions

At Philips, we work closely with clinicians to provide better, more personalized care for women. [Listen to Dr. Elena Cauzza of xDonna Institute in Switzerland discuss the benefits of Philips breast imaging solutions.](#)

Delivering more personalized breast care together

Every woman presents a distinct clinical challenge. Some have dense breasts. Others have had implants or breast surgery. And many are at high risk based on age, family history, or genetic make-up. That's why Philips offers a full portfolio of advanced imaging solutions to meet the breast screening needs of every woman.

These technologies can help accelerate your efforts in detecting breast cancer and prescribing a personalized course of treatment at the earliest stage. Learn more about Philips comprehensive breast imaging portfolio including these breakthrough innovations:

MicroDose SI
The first full-field digital mammography system capable of low-dose, non-contrast spectral imaging.

- Experience outstanding image quality at a very low X-ray dose
- Use objective Spectral Breast Density Measurement for your risk assessment
- Collect all spectral data non-invasively in a fast and comfortable mammogram
- Gain patients and referrals by offering unique, patient-focused technology

EPIQ
Philips new premium ultrasound system delivers extraordinary clinical image resolution and detail along with exceptional levels of information.

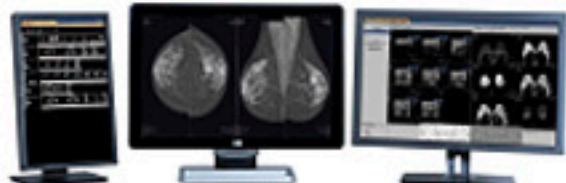

- Direct access to multi-modality images
- Elastography for more definitive information about tissue stiffness
- Panoramic volume imaging allows for whole organ acquisition, visualization, and quantification
- Amazingly portable, library quiet, and the greenest system we have ever designed

Elite Breast
A complete clinical solution designed to make breast MRI easier.

- New 16-channel breast coils offer superb image quality and speed
- Faster planning and reliable imaging quality with SmartExam Breast*
- Increased throughput with MammoTrak feet-first trolley
- Superb reviewing and biopsy planning with DynaCAD
- 2013 Best in KLAS Award for Philips Ingenia MR 3.0T & 1.5T

* SmartExam Breast is available for 1.5T and 3.0T systems.

IntelliSpace Breast*
A high-performance workstation that provides a comprehensive picture of multi-modality breast exams.

- Seamlessly interfacing advanced viewing & processing capabilities for mammography, ultrasound, and MRI on a single workspace
- Review prior images and reports to capture patient history
- Vendor neutral solution
